A ONLINE STORAGE MANAGEMENT SYSTEM

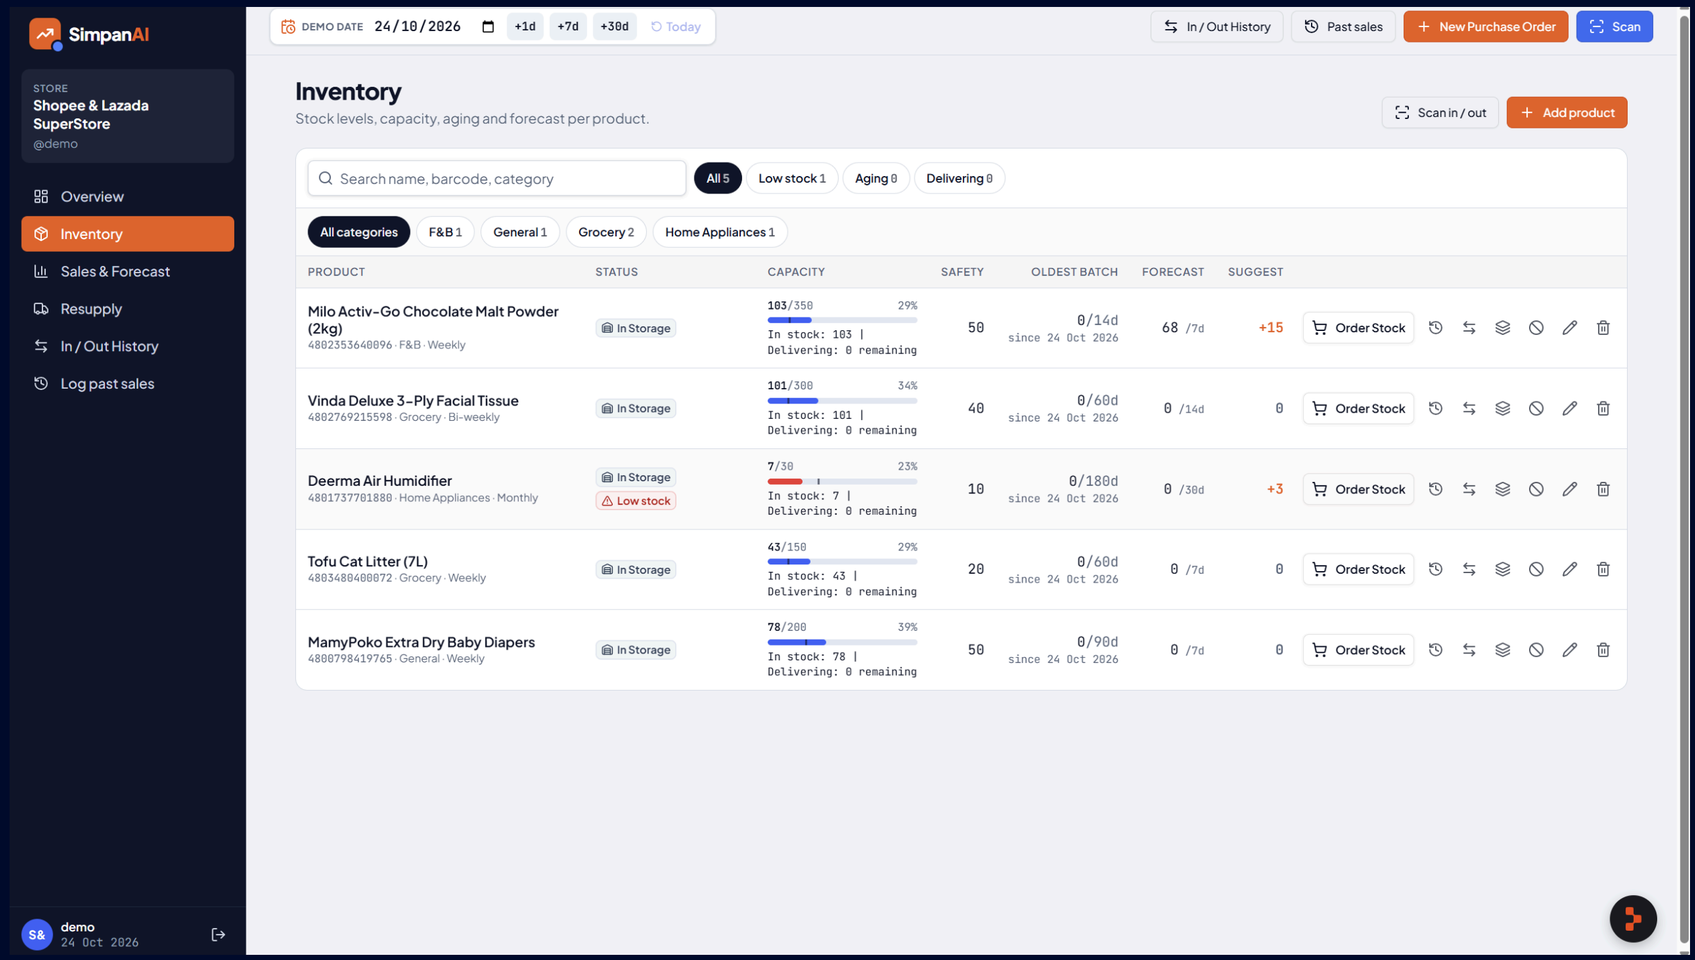

–Manage storage easily–

With this website, users are able to view the stock count available and check if any product has low stock or expired.

INVENTORY

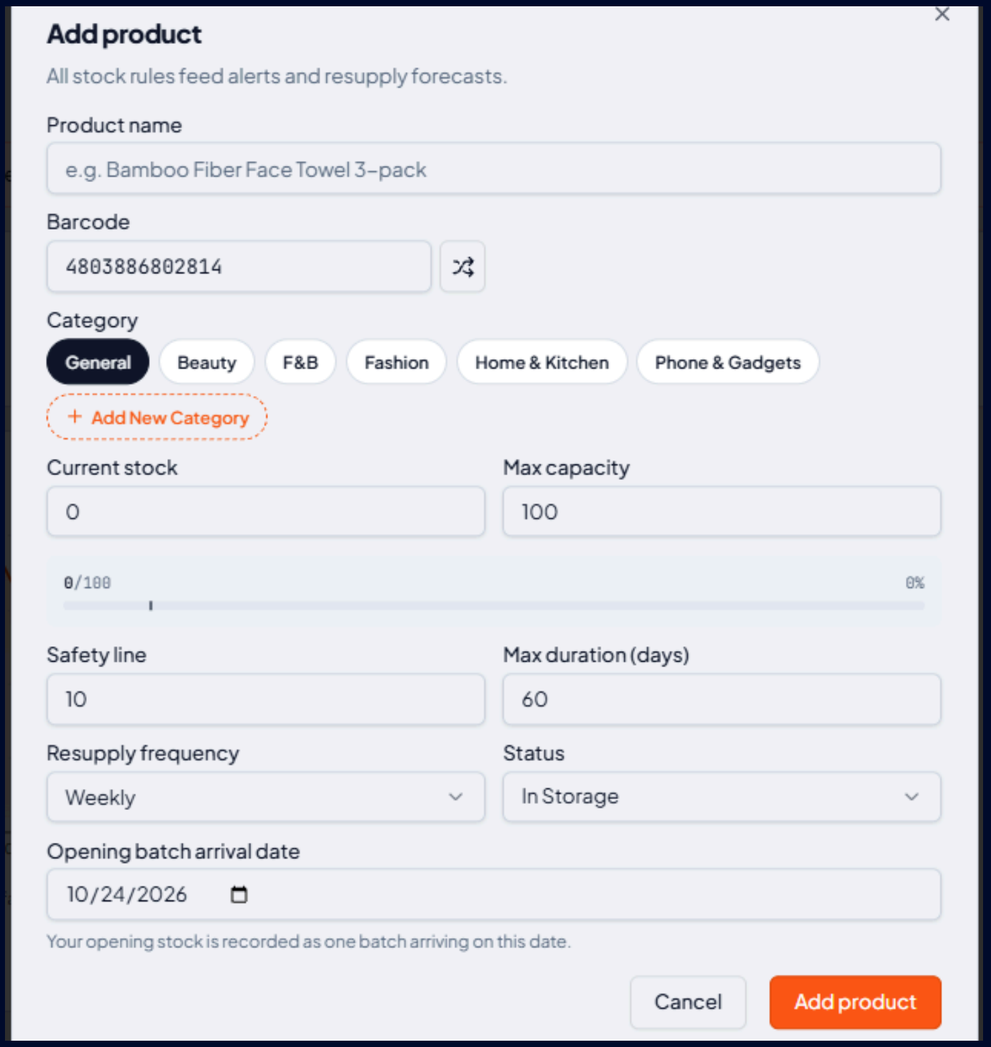

- Monitors stock levels, storage capacity, batch aging, and sales forecasts per product.
- Search by name or barcode, and filter by statuses like Low stock, Aging, and Delivering.
- Displays visual capacity bars, safety stock thresholds, and the age of the oldest batch.
- Auto-calculates suggested restock amounts with direct Order Stock and Scan in / out action buttons.

ADDING PRODUCT

Companies can add their new products along with its catogory.

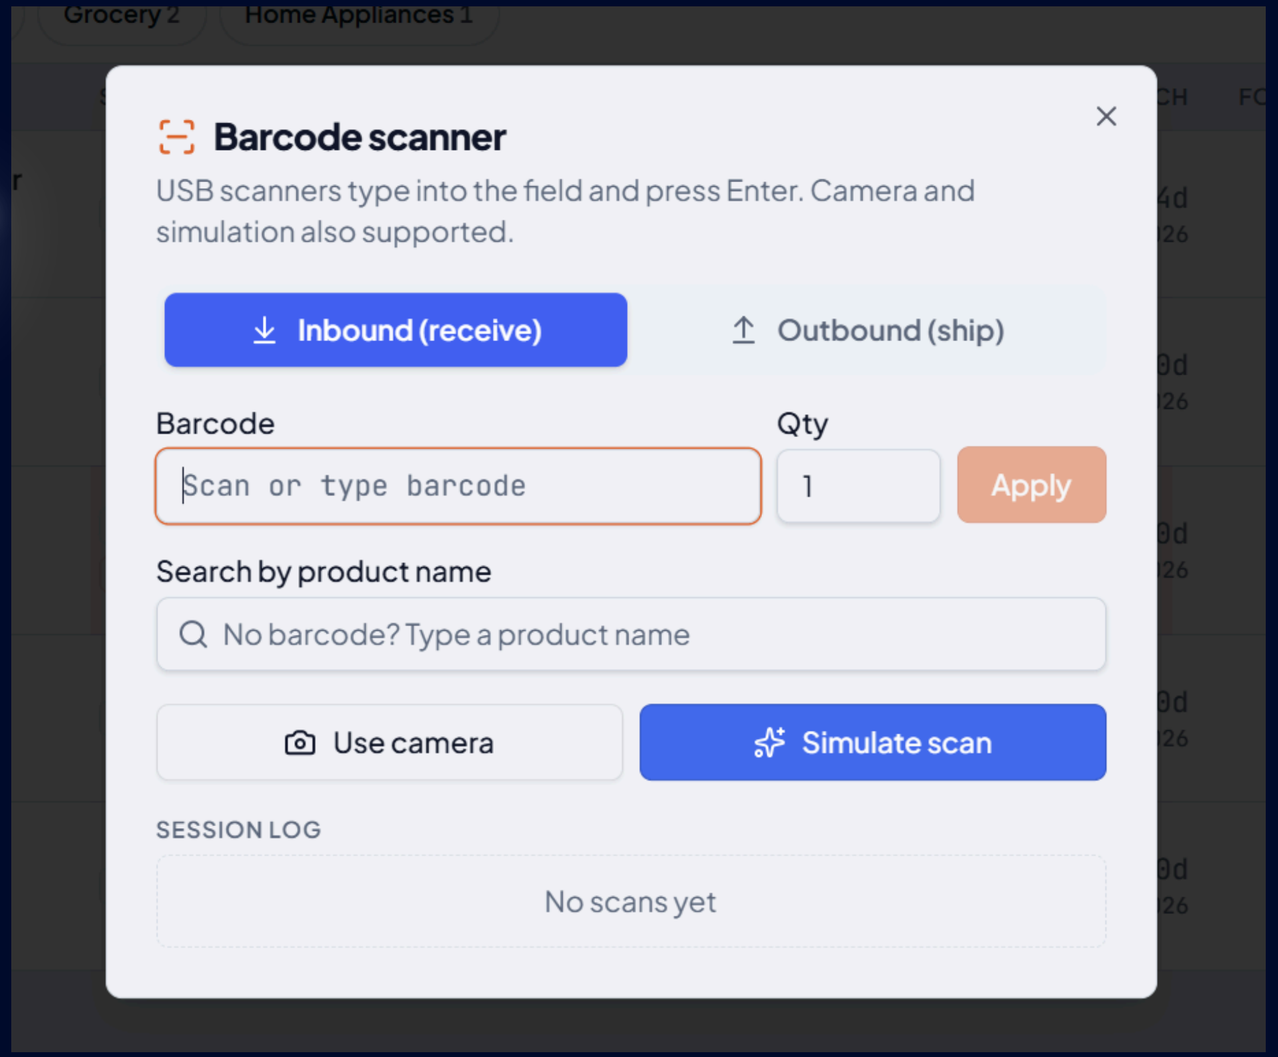

- Users can set the safety limit and max capacity for their product according to their storage capacity.
- The max duaration of storage can also be entered to let users track expired products.

MANUALLY LOG STOCK REPLENISHMENT

Receive stock without using website? No problem!

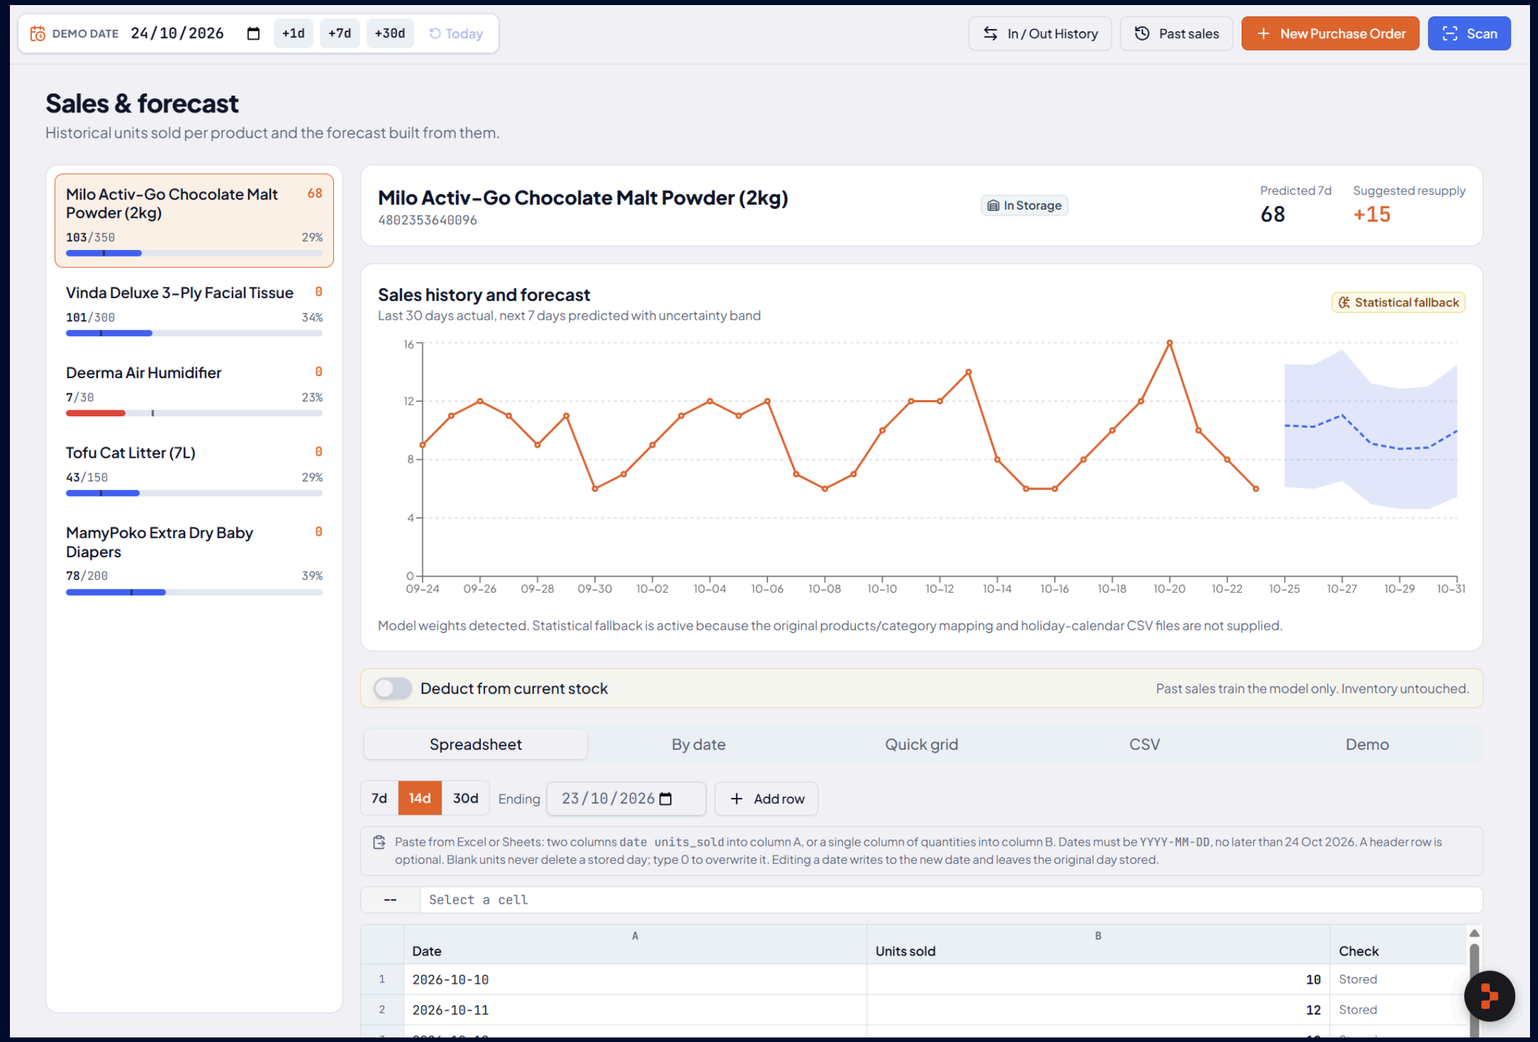

- Users are able to enter the amout of stock replenished without using the website manually. Allowing real time stock changes in the system

SALES & FORECAST

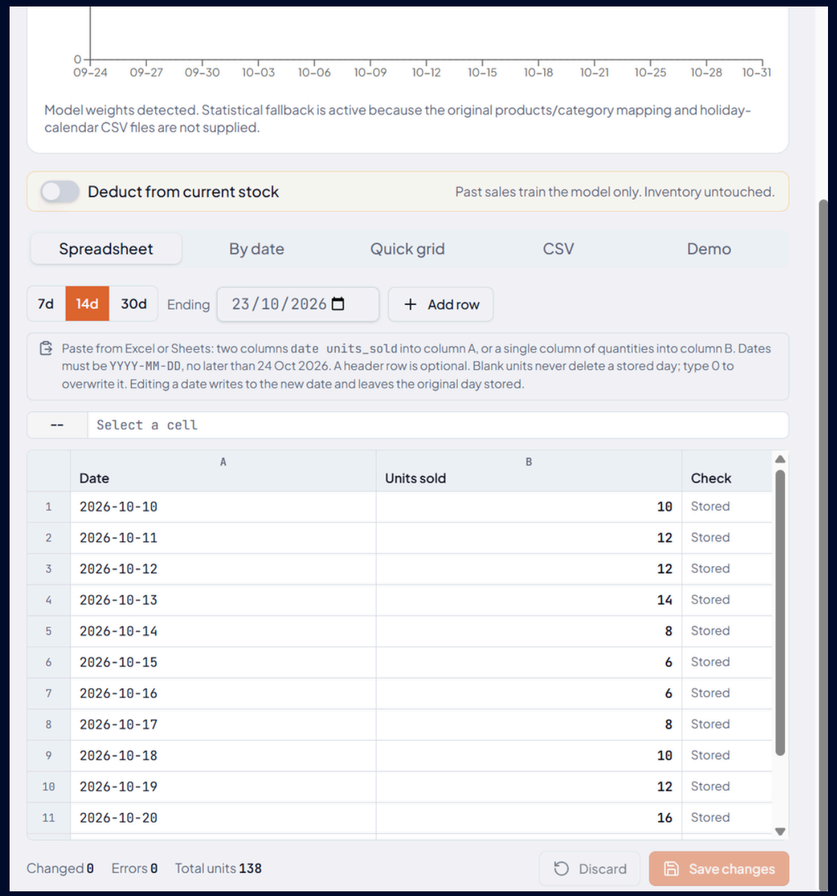

Get to know your future sales!

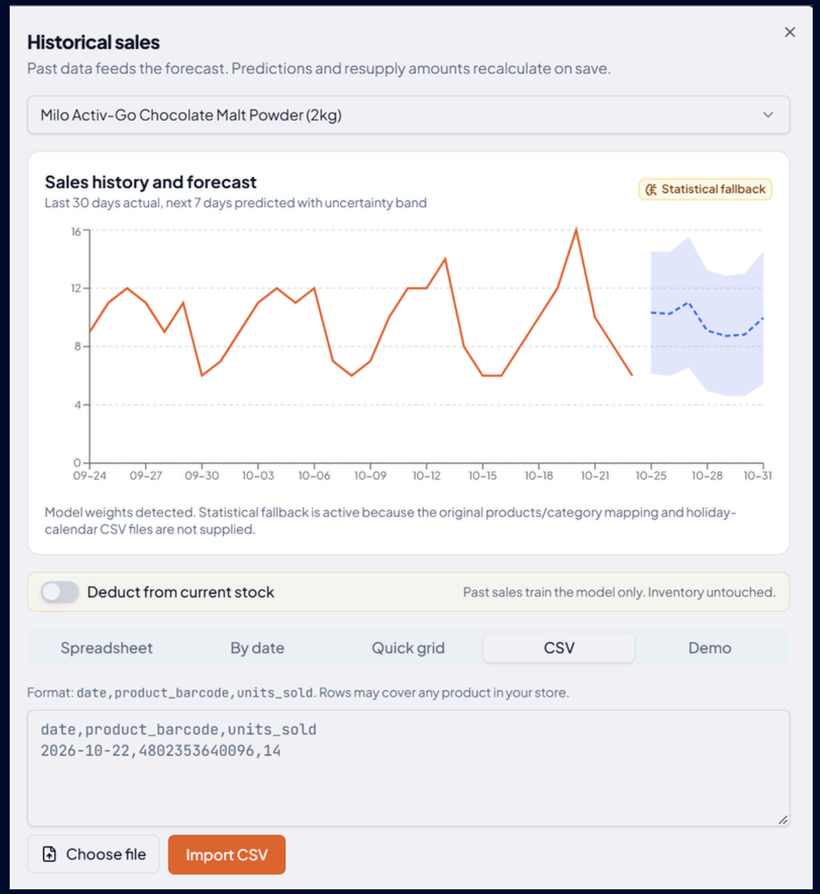

- This page will provide user a visualize sales history in the past 30 days and make adjustment based the number of sales.
- The website will also provide a prediction of sales in future days using an AI model, which can help users to plan ahead and make preparation accordingly.

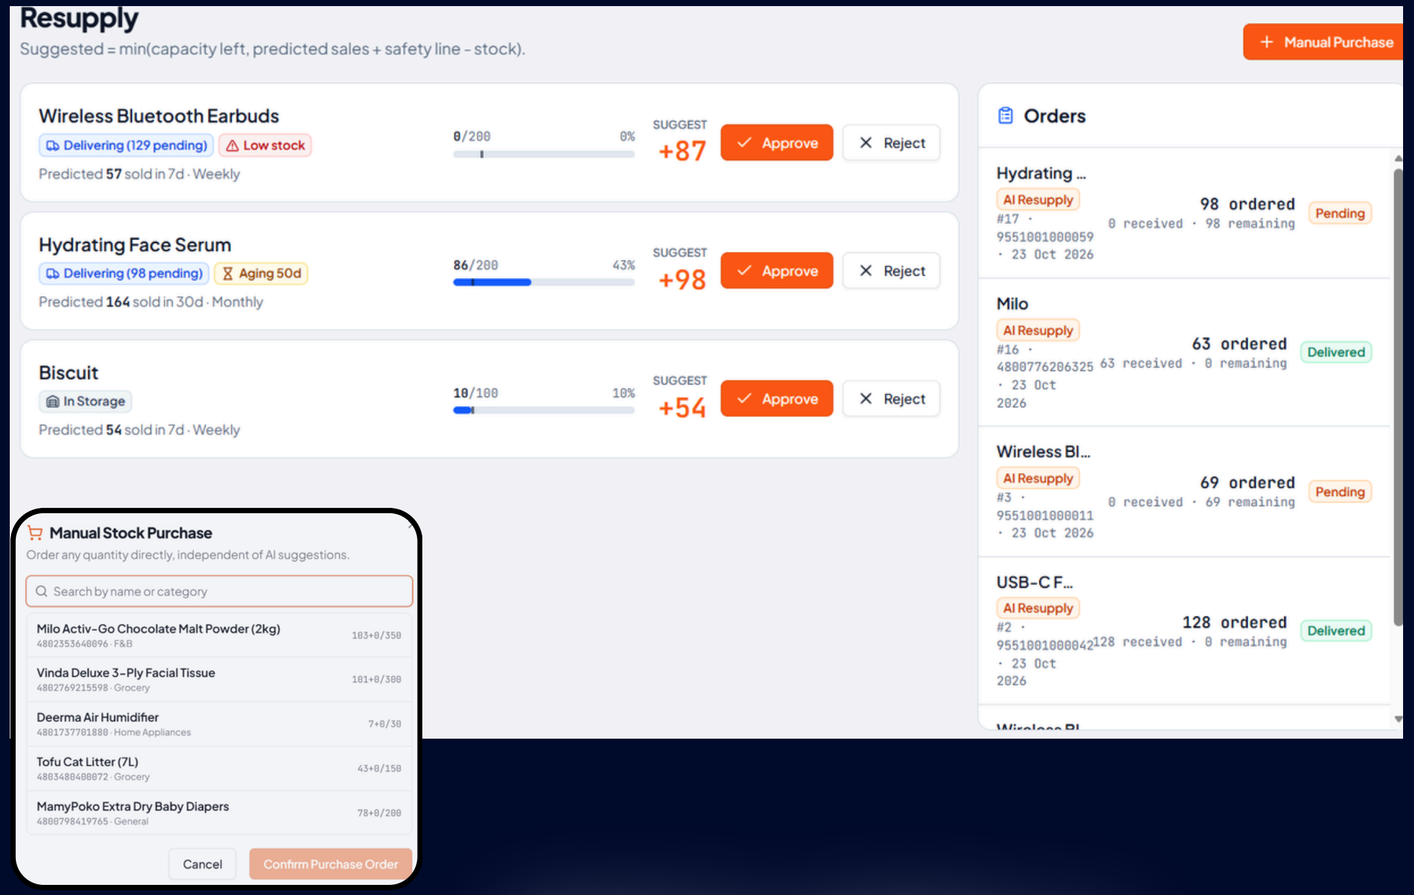

LOG PAST SALES

- Display up to 30-day actual sales and 7-day predictions with uncertainty bands.
- Auto-activates if original product mappings or holiday calendar files are missing.
- Toggle to feed past data into the forecast model without deducting from live inventory.
- Paste daily sales directly from Excel or Sheets for easy batch updates.

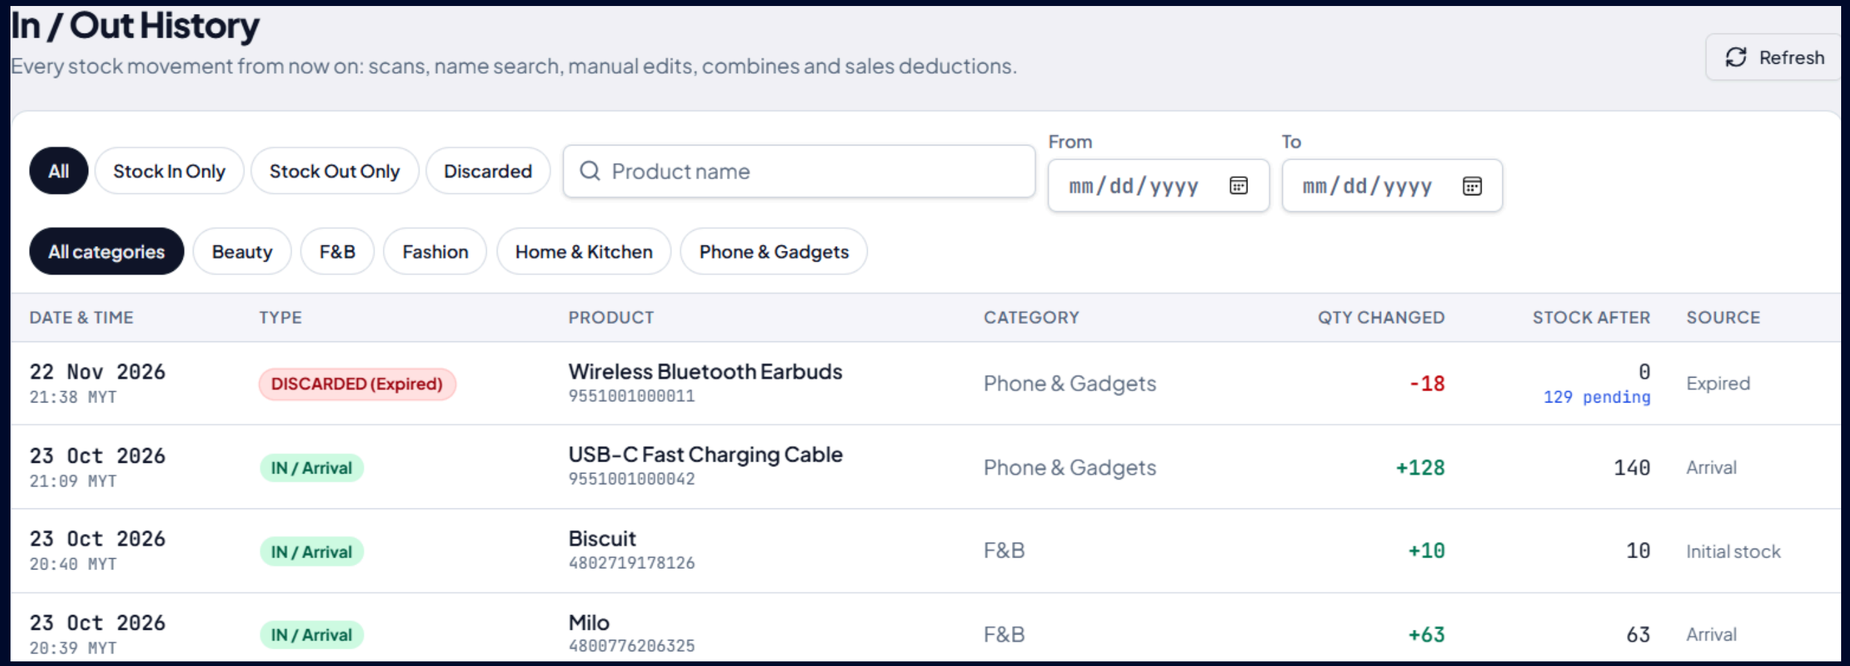

RESUPPLY →

- An AI Model will give a suggestion of number of product of inbound according to the predicted sales in future days.
- Users can order the stock by pressing the approve button. User can also change the number of stock to inbound before ordering.
- When the model didn’t provide a suggestion to the number of inbound, user can also purchase the item manually at the “Manual Purchase” button.

IN/OUT HISTORY

MULTI-FILTER SEARCH

Filters by inventory status (All, Stock In Only, Stock Out Only, Discarded), product category, product name, and date range.

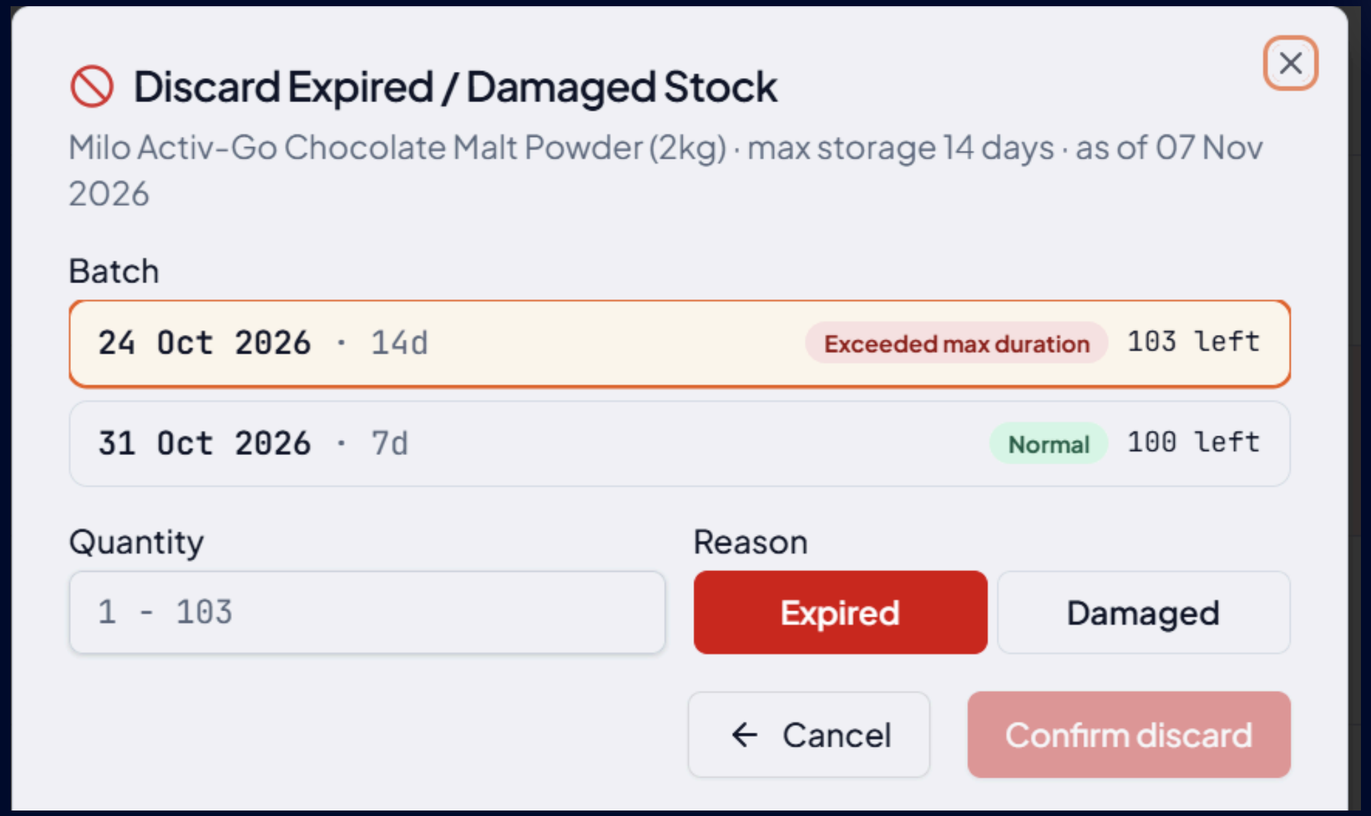

MOVEMENT LOGGING

Automatically records scans, name search, manual edits, combines, and sales deductions.

DETAILED STOCK LEDGER

Displays date & time, type, product, category, quantity, stock after (including pending counts), and source.

REMOVING DAMAGE / EXPIRED STOCK

- The system will record the date of the item when inbound. It will trigger a warning when the item is exceeded the max duration time.

- User can remove the item by quantities. The item that stay longest in the storage will been remove first. User can choose the reason of item been removed which provide an advantage of analizing.

THANK YOU
